Task:

You and three friends (a group of 4) are having dinner together at the Eco restaurant.

Each person must choose a starter, a main meal, a dessert and a drink.

Write down your orders.

Calculate the cost of each person's order.
Calculate the total cost for four people.

Your group decides to split the bill four ways. How much does each person need to pay.

Extension:

For each person, calculate the difference between the cost of their totals and their cost when splitting the bill four ways. i.e. who paid more and who paid less.
