

How to make **MOON SAND**

Kids love to make sand castles and build in the sand, so what better way to do this than in your own home. Using 3 simple ingredients and costing next to nothing you can make it yourself.

Materials:

10 lb bag of sand
1 box of corn starch
Water
Tempera paint (if you want it colored)
Large container (or large bucket)

How to make:

Mix the dry ingredients together first then add the water.

Only do a little at a time. Mix about 10 cups of sand to 5 cups of corn starch and 1 cup of water.

You don't want to use too much water. You just want it to have a damp feel, so you are able to mold it.

Once you are done playing with it place in a sealed container and will be ready for the next play time.

You could make a construction site, a space landscape, a dinosaur habitat or use cookie cutters to make shapes.
